

SchoolNet

Flexible solutions to
help schools work better.
Today and tomorrow.

THE NETWORKING SYSTEMS INTEGRATION PROFESSIONALS

We make it all come together to help your school work better.

No matter where your school may be in terms of the information superhighway, Systems and Services can make today's cutting edge technology work for you, your teachers and your students.

SchoolNet is designed to give K-12 schools the ultimate flexibility, cost-effectiveness and technological know-how in district, school intranet, and internet connectivity and communications.

We're the networking systems integration professionals, with a long and proven track record of making technology work for education.

Let us make it all come together to help your school run more smoothly, your teachers have more time to teach, and your students really connect to the world of learning.

Here's how the process works.

Needs Assessment. Systems and Services evaluates the status of your school's information infrastructure—and where you want to be tomorrow.

Infrastructure Design and Cabling. We design an infrastructure plan and cable the school for optimum efficiency, reliability and performance.

Network Design and Installation. We customize an integrated network, and install the necessary hardware and software you'll need to make it work the way you want it to.

Training and Service. We'll train the appropriate staff for optimal system performance ease-of-use.

Technical Support. When the network is up and running, we'll provide ongoing technical support to your technicians, staff and teachers to ensure a smoothly running operation. That includes our being able to access your network to quickly solve problems, and get you back to the business of education.

It's the voice, data and video solution for your school.

SchoolNet

Flexible solutions to help schools work better. Today and tomorrow.

Teachers have more time to teach so students learn better.

With SchoolNet, teachers are connected to the school office, the school district, other classrooms, the internet and the outside world via integrated communications through each classroom computer.

Teachers have more time to teach because paperwork is reduced, and information is accessed directly rather than having to depend on the office. Student records and other key data are available at their fingertips.

Telephone Service and Voice Mail

No more going to the office to pick up messages. Digital phones answer calls to the classroom without disrupting teaching time. When class is over, teachers can retrieve voice mail and return calls at will.

Fax Service

Faxes can be sent and retrieved right in the convenience of the classroom.

Intercom/Speakerphone

Teachers stay connected with the rest of the school with the flexible phone system, which can page a single classroom or the entire school with important information such as class times or security alerts.

E-Mail

Teachers' paper shuffling is reduced by school-wide and internet email.

High-Speed Internet Access

Teachers can collaborate with colleagues, take advanced courses or do essential research at any time.

Media Retrieval and Video on Demand

Rather than searching for electronic educational materials, teachers can retrieve and play them at the desk, or take advantage of satellite and CATV offerings. They can also share real-time conferencing with other staff.

Synchronized Clocks, Bells and Alarms

All bells and clocks in the school are synchronized, and alarms are activated simultaneously in every classroom.

The possibilities and benefits don't end there. SchoolNet can help parents and teachers communicate better so that together, they can do what's best for their students education.
